ACKNOWLEDGEMENT

I would like to express my special thanks of gratitude to my teacher **Prabhat Kumar** who gave me the golden opportunity to do this wonderful project on the topic of **Amazon Clone**, which also helped me in doing a lot of research and I came to know about so many new things I am really thankful to them

Secondly I would also like to thank my friends who helped me a lot in finalizing this project within the limited time frame.

1. Title of the project:

- **Amazon Clone**

2. Objective of the project:

- **The main objective of this project is to selling of product through online. And this website is very interactive to the users.**

3. Language Used

- **HTML, CSS**

Amazon Clone

Introduction

An Amazon clone app is a mobile application that replicates the functionality and features of the popular e-commerce platform, Amazon. It allows users to browse and purchase products, track orders, leave reviews, and more, just like on the original Amazon website.

Amazon clone script provides descriptions and images, search and filter options, shopping carts, secure payment gateways, and order management systems to keep your business high-end. With advanced features and convenient online shopping experiences, Amazon's clone website is positioned for entrepreneurs to flock to it.

What is an Amazon Clone App?

It is a white-label, feature-oriented e-commerce App that can be launched at any time as per the requirement. Armed with a series of details like the easy and fast process of ordering and checking out multiple payment gateways and multi-vendor outlets, it is one of the fascinating apps among its competitors.

Being one of the best app developers, we provide a top-notch clone app that can be completely customizable as per the client's needs. With features like live tracking & multi-currency integration, our Amazon Clone App provides you with a worldwide platform and clients and customers from a global destination.

Salient Features of the Amazon Clone App

We at WebRock Media offer the best **Amazon clone app development services** so that you and your customers can utilize the app and enjoy its rich features. Provide the following features for our ready to launch **Amazon clone app**, such as

Advanced Navigation Bar:

A website is incomplete without a navigation bar because it is the easiest way to get hold of the product or service that a consumer is looking for. Browsing through the categories to get your desired products is time taking & sometimes & even a Lot of people are unaware of it. So, a search bar is essential to let the customer feel comfortable.

Well Defined Homepage:

A home page is the first thing a customer notices, so creating a compelling homepage that will greet your customer with positivity is one of the essential parts of homepage design. We emphasize creating an aesthetically pleasing website homepage with the latest multimedia inputs.

By landing at the homepage, a customer will get to know about the latest offers, deals, discounts, or any ongoing campaigns. Furthermore, information about new arrivals, FAQs, and exhilarating videos is available.

In-App Chat Facility:

These features make the process easier for your customers. Whenever a customer lands on your website, a pop-up will be available for in-app chat. On clicking that, they will be able to chat with a customer care representative to address any query.

Most of the time, the artificial intelligence facility is available in the 24hr chat process to assist your customer. This way, a customer feels more connected and assured whenever they land on your website or App

AR View:

A lot of time, consumers feel slightly skeptical about purchasing a product online. Especially when they are searching for a retail product like fashion garments or shoes, the biggest concern they face is the lack of the trial facility that a physical store offers.

Now you can offer them a virtual trial facility with the advanced AR view technique and get ready to shatter all the constraints that online retail may face. This facility also overcomes any misconceptions associated with online shopping.

Advanced Shopping Cart:

This feature lets your customer easily purchase the necessary goods. A shopping cart makes the process of checkout seamless and hassle-free. Your customer can add as many products as possible and go to check out. No need to stand in a queue for hours before checking out.

Furthermore, the checkout feature stores and displays all the vital details like the total cart value, when the product will be delivered, if there is any shipping charge associated, and other vital details of each product like weight and quantity. This enables a customer to get all the details before making a payment.

Wish List:

Online marketplace like Amazon clone is like an ocean that can give you access to more than 10000+ products in various price ranges. So, while browsing through these product lists, your consumer might like several products they might purchase later. Wishlist features enable them to store these products safely in a particular location which they can access later.

We provide the most advanced wish list feature, which will notify you of the status of a saved product from time to time. So, whether it is within the stick or not, if there are any changes in the displayed price or quantity, everything is notified to your customer through messages. This wishlist option is very useful as a customer can create a checklist point that can be accessed anytime.

On-time Tracking:

One of the biggest hurdles consumers face is to wait for their products until they get delivered. Even the anxiety intensifies when the payment is already made. And that is why to ensure customer satisfaction, we offer real-time tracking, due to which a customer can track their package and get to see the development from time to time.

Necessary details like dispatching time, delivery status, and delivery person contact details are all mentioned along with the tracking details. Moreover, the live location updates of their products make them assured and gain more trust.

Language Support:

Amazon is a global platform, and customers across different time zones access it to get their desired product. Therefore, **Amazon clone development** should be done by keeping in mind the global consumers, and that is why we offer multilingual support by including the world's major languages. This enables users across the globe to access your app more conveniently and feel personally attached to it.

Sharing on Social Media:

The impact of social media is now very prominent in our daily life, and social media marketing is surging rapidly. We offer robust social media sharing options through which your customers can share their favourite products on their respective social handles. This will boost your social marketing strategies to a new level.

Reviews & Ratings:

Give your customer the freedom to express their experience in the review section. Here they can write about their experience, whether good or bad while purchasing hoods from your App. Rating options are also available, and a consumer can rate your service.

Reviews & ratings give personalized feelings, and customers get more attached to your app. Moreover, a new customer will always go through the reviews to get to know the working principle of your app.

Multi payment option:

Gone are those days when you can only pay through cash once after you receive the product. Now an Amazon clone app is equipped with a multiple payment option facility. You can pay through a debit card or credit card, even though there is UPI at your check out.

This will keep your delivery hassle-free as you don't need to be present at the delivery location to hand over the cash, and this will also save your cash for future use. Furthermore, our Amazon Clone App provides a card-on-delivery option for purchase. Due to the rise of pandemics, many people are avoiding cash on delivery options yet are skeptical about paying before getting the product.

For them, we have introduced the link or QR code scanner process. A consumer can scan the QR code and pay the merchant without touching it. The delivery agent will send a link on the registered mobile number by clicking it and redirecting them to the UPI payment option to generate pay.

Product Comparison & Filters:

An Amazon clone app can store more than 100000 products under one roof. Your customer can find similar types of products from various vendors and thus can easily compare their price, quality, material, design, and delivery date. It saves the time to visit multiple stores to purchase a product. CZ can all be found under one roof.

Moreover, an Amazon-like app will have various products from various categories. So, searching for the best products that suit your consumer requirements must be tough and time-consuming. That's why we have introduced the robust filter option. Where your customer can filter their requirements to narrow the search options, you can filter the search based on color, size, price range, delivery date, etc.

Your Amazon Clone App is also beneficial for the vendors, and we have introduced a series of features so that more vendors can register themselves into your ecommerce platform. Check them out.

Product details with customization:

A vendor can give minute details of the listed products so that a customer can get all the necessary information. Apart from that, we offer them customization options where a vendor can add or customize certain details that the customer might feel interested in.

Bulk Selling:

Vendors can add a bulk number of products with a definite price amount for bulk selling.

Store details: A vendor can give the details of their physical store, like Google location, operating hours, etc. So that a customer can go and pick up the product after ordering or visit the store for further business.

White-label product selling:

A vendor can use his brand name and logo while his products are uploaded.

Besides providing these astonishing features to the user & vendors, our app is equipped with these specialized details which help the admin to work & manage seamlessly, such as

- Admins can access all the data provided by vendors and customers
- They can approve the store listing request from the vendors after examining the credentials
- Can manage the products and remove that are no longer in the stock
- Can view and manage the feedback section and remove any spam review
- Can track any orders made by the customers and can communicate with the delivery partners

Our Amazon Clone App will enrich you with the following benefits.

Provide A Personalized Experience:

Our Amazon Clone App is completely customizable and easy to launch. You can customize these details as per your business requirements.

Lightning Speed:

We ensure the fastest loading time for the app on all kinds of devices. We always check for bugs in the coding system and fix it accordingly. Thus all our users get robust functionality.

Advanced Bug support:

This unique bug tracking feature of ours helps to detect and remove bugs seamlessly

Multiple Panels for Each user:

We provide three distinct panels for consumers, admins & vendors for smooth functioning

Multi App Platforms:

Our App is functional on both Android & Apple and can be easily installed from the Google play store or Apple's App Store.

Finest Analytics Tool:

With our most advanced analytics tool, you can readily analyze all implied market strategy's working principles and effects. In case of any customer acquisition, you can readily analyze it. Moreover, you will get to know customer behaviors, cart abandonment rates, etc.

Overview

The Amazon Clone app provides a multi-vendor ecommerce marketplace via which the vendors and the users can communicate and sell/buy products. Users log in to the Amazon clone application and complete the user authentication process.

Technology Used

- **Programming Language:-** HTML, CSS
- **MIDDLEWARE:-** Web Browser(Microsoft Edge, Google Chrome, Internet Explorer…)

DESCRIPTION OF TECHNOLOGY

What is HTML?

HTML is an acronym which stands for Hyper Text Markup Language which is used for creating web pages and web applications. Let's see what is meant by Hypertext Markup Language, and Web page.

Hyper Text: HyperText simply means "Text within Text." A text has a link within it, is a hypertext. Whenever you click on a link which brings you to a new webpage, you have clicked on a hypertext. HyperText is a way to link two or more web pages (HTML documents) with each other.

Markup language: A markup language is a computer language that is used to apply layout and formatting conventions to a text document. Markup language makes text more interactive and dynamic. It can turn text into images, tables, links, etc.

Web Page: A web page is a document which is commonly written in HTML and translated by a web browser. A web page can be identified by entering an URL. A Web page can be of the static or dynamic type. With the help of HTML only, we can create static web pages.

Hence, HTML is a markup language which is used for creating attractive web pages with the help of styling, and which looks in a nice format on a web browser. An HTML document is made of many HTML tags and each HTML tag contains different content.

CSS Introduction

Cascading Style Sheets, fondly referred to as CSS, is a simply designed language intended to simplify the process of making web pages presentable. CSS allows you to apply styles to web pages. More importantly, CSS enables you to do this independently of the HTML that makes up each web page. It describes how a webpage should look: it prescribes colours, fonts, spacing, and much more. In short, you can make your website look however you want. CSS lets developers and designers define how it behaves, including how elements are positioned in the browser.

While HTML uses tags, CSS uses rulesets. CSS is easy to learn and understand, but it provides powerful control over the presentation of an HTML document
